

Provenance check: raw input4MIPs against the conditioning the emulator reads
The RATIO row is the test. Constant = the cond files are a faithfully rescaled copy and the emulator is self-consistent in its own units.
Drifting or scenario-dependent = the cond files misrepresent the shape of the forcing, which internal consistency would not excuse.
ssp370 raw is DECADEAL (the file's own resolution). CO2 omitted: the staged input4MIPs CO2 is aviation-only, not the cond channel's source.
