

Near-surface temperature at four cities, every TRAINING experiment — solid = emulator (5 members), dashed = CESM2 band = min-max across members. Member counts differ (CESM2: 11 hist, 10 aaer, 10 ghg, only 3 ssp370), so band widths are not comparable between experiments. Nearest gridpoint on the 192x288 grid.

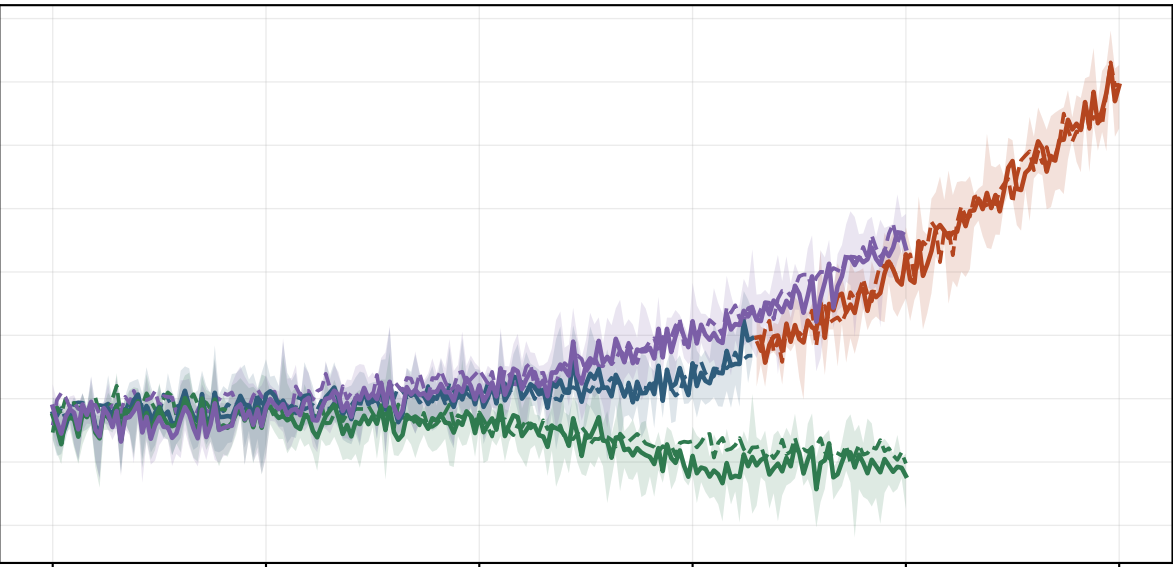

Helsinki (cell +59.84, +25.00)

Tokyo (cell +35.34, +140.00)

Sydney (cell -33.46, +151.25)

Sao Paulo (cell -23.09, -46.25)
