

Provenance check: raw input4MIPs against the conditioning the emulator reads — BC on the MATCHED CEDS-2017 vintage the builder asks for
 The **RATIO** row is the test. Constant = the cond files are a faithfully rescaled copy and the emulator is self-consistent in its own units.
 Drifting or scenario-dependent = the cond files misrepresent the shape of the forcing, which internal consistency would not excuse.
 ssp370 raw is DECADEAL (the file's own resolution). CO2 omitted: the staged input4MIPs CO2 is aviation-only, not the cond channel's source.

BC (raw vintage: CEDS-2017)

SUL (raw vintage: CEDS-2017)
